## **Basic Comprehensive Orthodontic Course**

This course is offered by College of College of General Dental Practitioners Singapore ([www.CGDP.org.sg](http://www.CGDP.org.sg)) a [Comprehensive Orthodontic Modular with Invisalign and Micro Implant in Orthodontic Anchorage for Beginners](#). The course will take place between Jan-Dec with 2-3 monthly apart from each module. This basic course aim is to educate the GPs on how to integrate orthodontics in their daily diagnosis of orthodontics problems in general practice. Recognition and timely treatment of mixed dentition skeletal problems with functional appliances or simple crowding cases with the Straightwire Appliance or Invisalign could well be treated orthodontically by the GPs as the 1st line of contact with patients in a family practice. Simple six months orthodontic tooth movements prior to implant or bridges often improves the esthetic tremendously and functional outcome of the dental treatment. This 4 modules course aims to help GPs better understand orthodontics and its parameters of treatment, engaging GPs to proactively diagnose, treat and refer complicated cases to Orthodontic Specialist for orthodontics treatment. We encourage participants to attend all 4 modules listed as it has been carefully structured for GPs to have a holistic understanding of the type of orthodontic care possible in general practice with special emphasis on the treatment of our

predominantly Asian community.
