Antithrombotics and Dentistry – The Clot Thickens

Date and Time: 15 April 2017, Saturday, 2.00 pm to 4.30 pm

Venue: Ng Teng Fong General Hospital, Tower A, Level 1, Auditorium
1 Jurong East Street 21, Singapore 609606

CPE Points: 2

Brief Description: The Antithrombotics and Dentistry – The Clot Thickens lecture is organized by the College of Dental Surgeons, Singapore. The speaker of the event is [Dr Winston Tan](#), Chair of the Chapter of Oral and Maxillofacial Surgeons.

In recent years, the field of antithrombotic and anticoagulation medication (ATM) has seen significant change. There has been increasing use of non-traditional drugs in patients with cardiovascular and cerebrovascular disease. The dentist is now confronted with a patient with an increased propensity to bleed and a difficult conundrum: To keep the patient on ATM and risk prolonged bleeding, ecchymosis and swelling? On the other hand, stop ATM, with the risk of thrombus formation?

To [help answer these questions](#), the College of Dental Surgeons Singapore has formed a task group with the aim of providing evidence-based guidelines in managing dental patients on antithrombotic and anticoagulation medications. The findings and recommendations of the workgroup will be presented in these lectures and will provide all dental practitioners, general dentists or specialists alike, with up-to-date and evidence-based guidelines to help you manage such

patients in your dental practice.

Graftless Solutions for The Edentulous Patient: Myths and Realities

The All-on-4R treatment concept has become extremely popular and effective as it possesses characteristics which benefits both practitioner and patients equally. It allows full arch rehabilitation of patients who are edentulous or have failing dentition, in a graftless manner with the ability to immediately load and function onto the provisional teeth prepared for the patient. That way, the patient would enjoy a rapid improvement to their quality of life, decreased treatment times associated with traditional implant and bone grafting techniques and also lower costs comparatively to traditional implant treatment modalities.

Join us along with [Dr. Saj Jivraj](#), as he patiently walks us through the All-on-4R treatment concept, from treatment planning to prosthetic placement as he patiently dissects the intricacies and possible complications of this exciting contemporary concept in implant dentistry in a clear, informative manner and provide proposals and discussions to many solutions and innovative treatment strategies. [This lecture and hands-on course](#) will cover all perspectives of the

All-on-4R treatment concept and is intended for all of the dental team, from the implant surgeon to the restoring clinician.

Orthodontic Masterclass by Dr Chris Chang

World-renowned orthodontist and trainer [Dr Chris Chang](#) will conduct a full-day masterclass lecture in Kuala Lumpur, Malaysia on 4 June 2017.

Lecture: Problem Solving and Simplifying Difficult Orthodontic Treatment

Topic 1: Everlasting Youthful Smile in Case II Cases

Learning objective: Participants are expected to be able to design an appropriate mechanic force system consisting of bite turbos and Class II elastics and IZC screws for Class II cases.

Topic 2: Class III Cases Made Simple

Learning objective: Participants are expected to be able to correctly differentiate skeletal Class III malocclusion from pseudo Class III malocclusion.

Topic 3: Gummy Smile/High-Angle Case Not a Challenge Anymore

Learning objective: Participants are expected to be able to articulate the

intruding mechanics of mini-screws in the treatment of gummy smile.

Topic 4: Management of Adult Complex Cases and their Expectations

[Early-bird \(by March 2017\) registration](#) fee: SGD\$480

DPN Media is the official marketing partner for this dental event. To register for the lecture, please contact Razak Ahmad.
