Sunstar GUIDOR Perioclina® Periodontal Ointment

Many people in Singapore, especially the elderly population, suffer from periodontitis and more attention can be given to its treatment.

Ever wanted to treat your patients having periodontitis with antibiotics but is worried about the systemic side effects of oral antibiotics?

Good news! Sunstar GUIDOR's Perioclina® Periodontal Ointment is now available in Singapore!

Perioclina® is a local antibiotic (minocycline dihydrochloride) that can be injected specifically into the affected periodontal pockets to allow for a more targeted treatment while minimizing the possible adverse systemic side effects from consuming oral antibiotics. Designed in a special applicator, Perioclina® Periodontal Ointment can be easily applied into periodontal pockets with ease.

What's more! The special formulation of Perioclina® allows the gradual and constant release of minocycline into the periodontal pocket over many days. As such, Perioclina® can be applied once every two weeks.

Clinical trials have demonstrated good results in eliminating the disease-causing bacteria and alleviating inflammatory symptoms, thereby improving gingival health.

For more information, visit our website at www.GUIDOR.com or contact our sales representatives (Guo Rong-90122035, Yi Ming-97929652) now!
