Note: This information is sent on behalf of

LISTERINE®

For any enquiry, please refer to the contact details as indicated.

LISTERINE - A Landmark Study

LISTERINE ran a landmark study over 3 countries with 29 randomized, observer-blinded, placebo-controlled clinical trials. This involved 500,000+ sites and 5000+ subjects. The results show that patients who added LISTERINE to mechanical methods had nearly 5x more plaque-free sites at 6 months (vs mechanical methods alone) and over 2x more healthy gingival sites at 6 months.

Mouthwashes containing essential oils should be considered the first choice for daily use as adjuvants to self-performed mechanical plaque control.

Promote an essential oils mouthwash today.

Contact Shermaine at slee274@its.jnj.com or Iris at itoh@ITS.JNJ.com to find out more.
